

2010 ANTIBIOGRAMS PACIFIC DIAGNOSTIC LABS (PDL)

Highlights of the 2010 Antibigram report from PDL labs:

- The 2010 Antibigram report should serve as a guide in antibiotic treatment options based on patient populations served by our lab. The charts are representative *only* of our in vitro testing of isolates from patient samples. **This data should be used in conjunction with your clinical experience and/or current reference material such as *THE SANFORD GUIDE TO ANTIMICROBIAL THERAPY* which is printed yearly (www.sanfordguide.com)**
- We have separated the four facilities Antibigrams for 2010 in order to expedite delivery to you. The four locations' Antibigram are listed below and represent patients whose specimens presented primarily to that particular location.
 1. Pacific Diagnostic Labs * (PDC) on blue paper
 2. Santa Barbara Cottage Hospital (SBCH) on pink paper
 3. Goleta Valley Cottage Hospital (GVCH) on orange paper
 4. Santa Ynez Valley Cottage Hospital (SYC) on chartreuse paper
- The chart(s) represent the percent susceptible for that bacteria/drug combination.
- Footnote explanations are on the back page.
- Sample size for any bacteria/drug combination may vary from the average sample size listed in the chart.

* **PDC** patient population consists of out-patient clients within approximately a 90 mile radius of Santa Barbara.
